

A morphology catalog for SHARDS

M. Huertas-Company

*Mei, Shankar, Barro, Pérez-González, Bernardi, Daddi,
Cabrera... + CANDELS morphology team*

CANDELS visual classification tree

Kartaltepe+14

- Classification of galaxies in GOODS-S with **$H < 24.5$**
 - Each galaxy is classified by 3-5 experts
 - Fractions for ~8000 galaxy in GDS
- Classification done in F160 (+F125, F105)

Deep convolutional neural networks

- **Hubel & Wiesel 1962 + LeCun 1998**
- Mimic the human brain
- Learn non-linear features (from pixels!) using hidden layers
- Very expensive in computing time
 - GPUs...
- Very popular, used by *all* the technology giants (Google, Microsoft)

▶ 99.2% accuracy

▶ 94.3 % accuracy

CONVNET for CANDELS

- **TRAIN:** ~50.000 redundant galaxies in GDS (~10 days)
- **CLASSIFY:** GDN, COSMOS, UDS, GDS, EGS (~8h/field)

MHC+15a

Catastrophic “errors”

fsph_v > 0.7 and fsph_a < 0.3 or fsph_v < 0.3 and fsph_a < 0.7

~15/8000=0.2%

fsph=0.82 / 0.25
fdisk = 0.5 / 0.76
firr = 0.0 / 0.22

fsph=0.8 / 0.25
fdisk = 0.75 / 0.95
firr = 0.0 / 0.0

fsph=0.76 / 0.11
fdisk = 0.6 / 0.66
firr = 0.39 / 0.53

VISUAL / AUTO

Catalog available in Rainbow

- ~ **50.000** galaxies in **5 CANDELS fields** (GDN, GDS, COSMOS, UDS, EGS) *X 3 filters X 3 rotations*
- 10 probabilities (fractions for each galaxy)
- **H < 24.5**
- **$\langle z \rangle = 1.25$**
- Optical rest-frame morphology at $1 < z < 3$
- ~80% complete at $M_{\text{star}} > 10^{10} M_{\text{sol}}$

MHC+15a

Use it for your science!

***Pure* SPHEROIDS**

BULGE + DISK

***Regular* DISKS**

***Irregular* DISKS**

Irregulars

Selection along the progenitors

Detailed morphologies

Pure SPHEROIDS

BULGE + DISK

+

Regular DISKS

Irregular DISKS

Irregulars

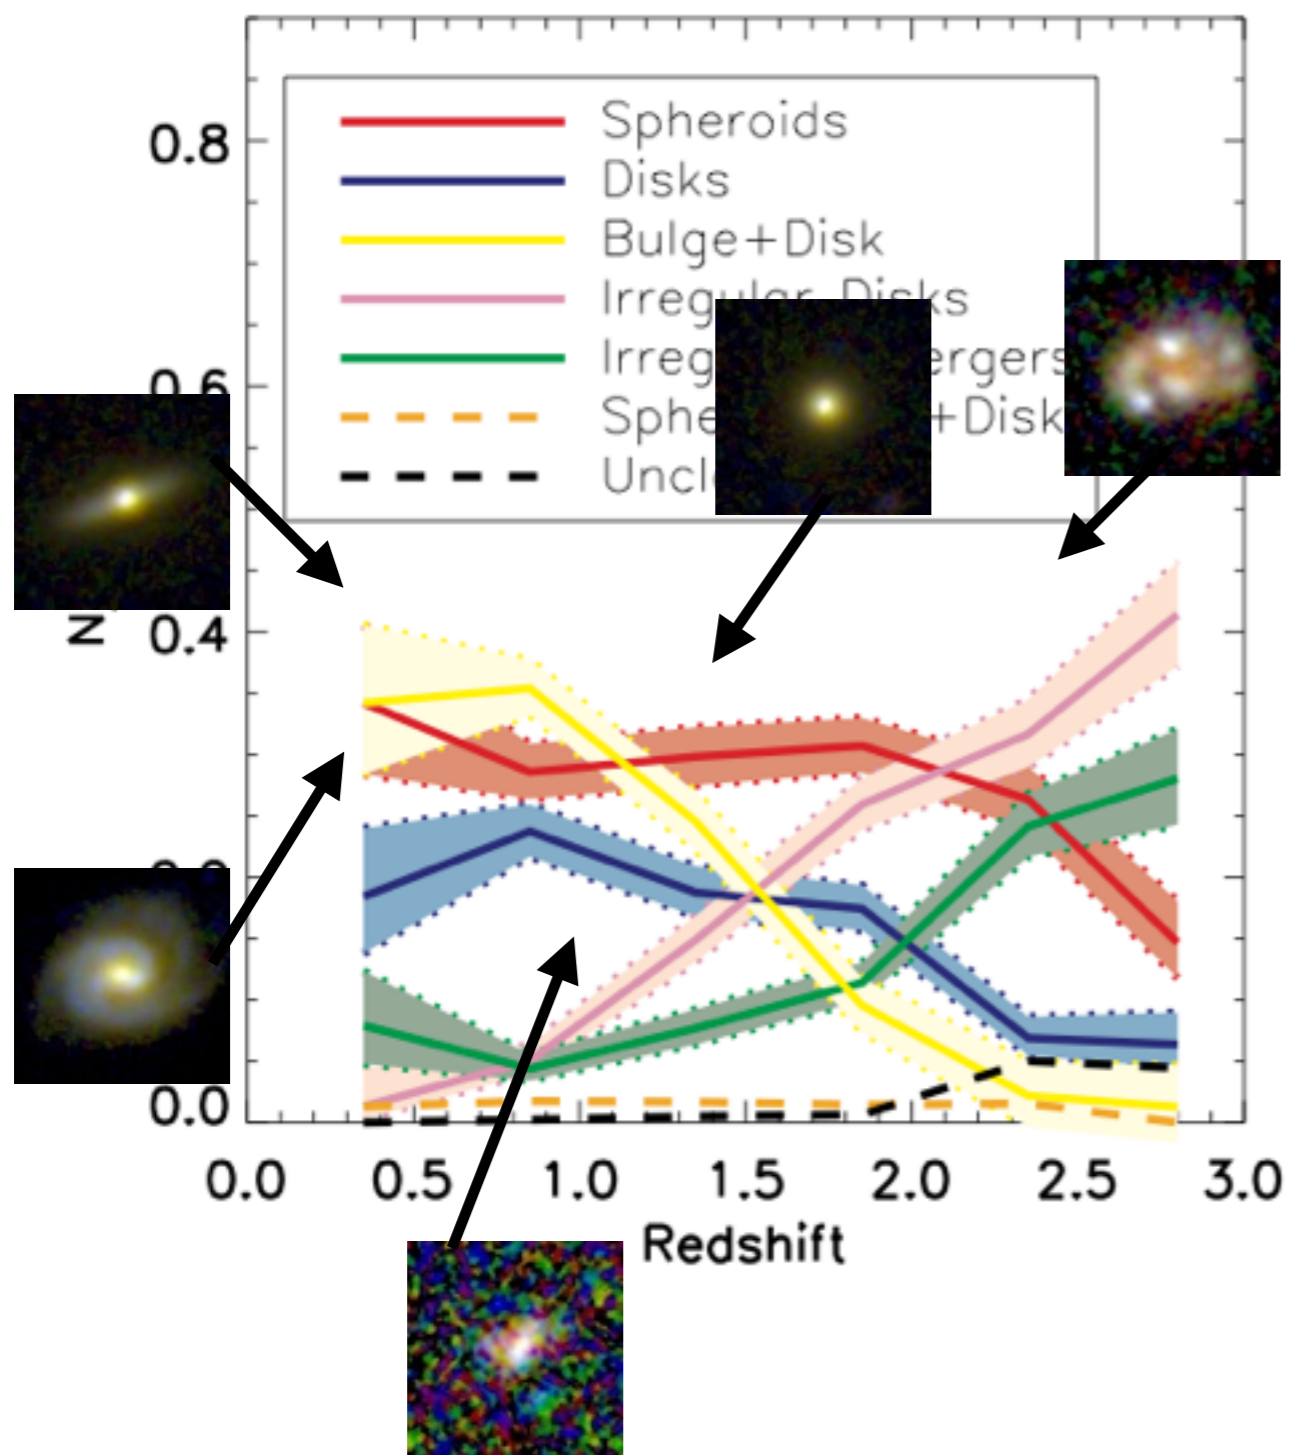

Redshift

A constant fraction of “pure bulges”

~70% of progenitors of massive galaxies at $z \sim 3$ were irregular

MHC+15b

MHC+15b

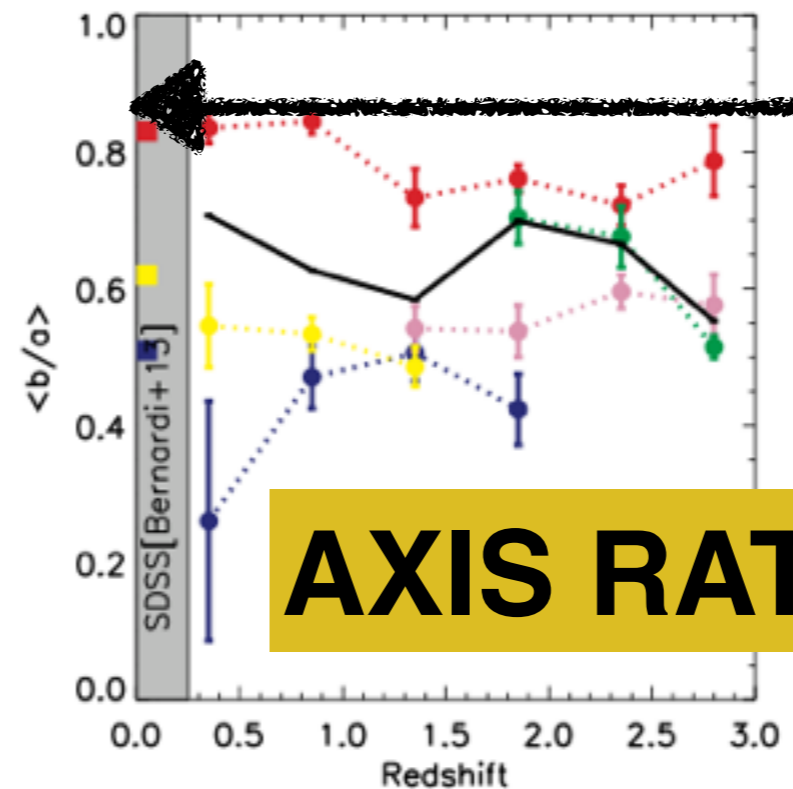

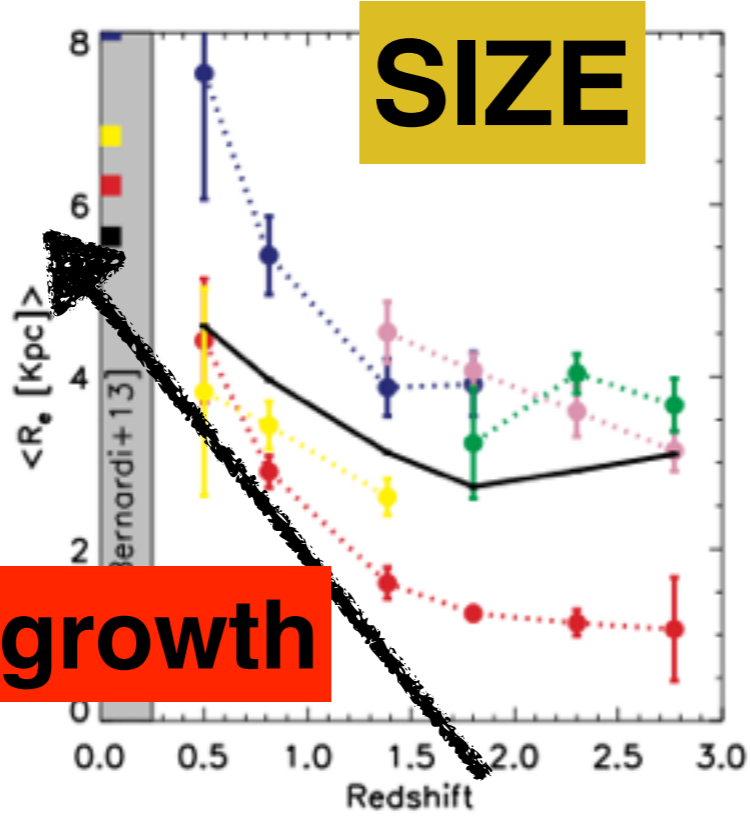

1. **“A clumpy track” (slow):** A morphological transformation at $z > 1$ from clumpy/irregular disk galaxies to regular disk + bulge systems

2. **“A nugget track” (fast):** Bulges rapidly formed at $z > 2.5$

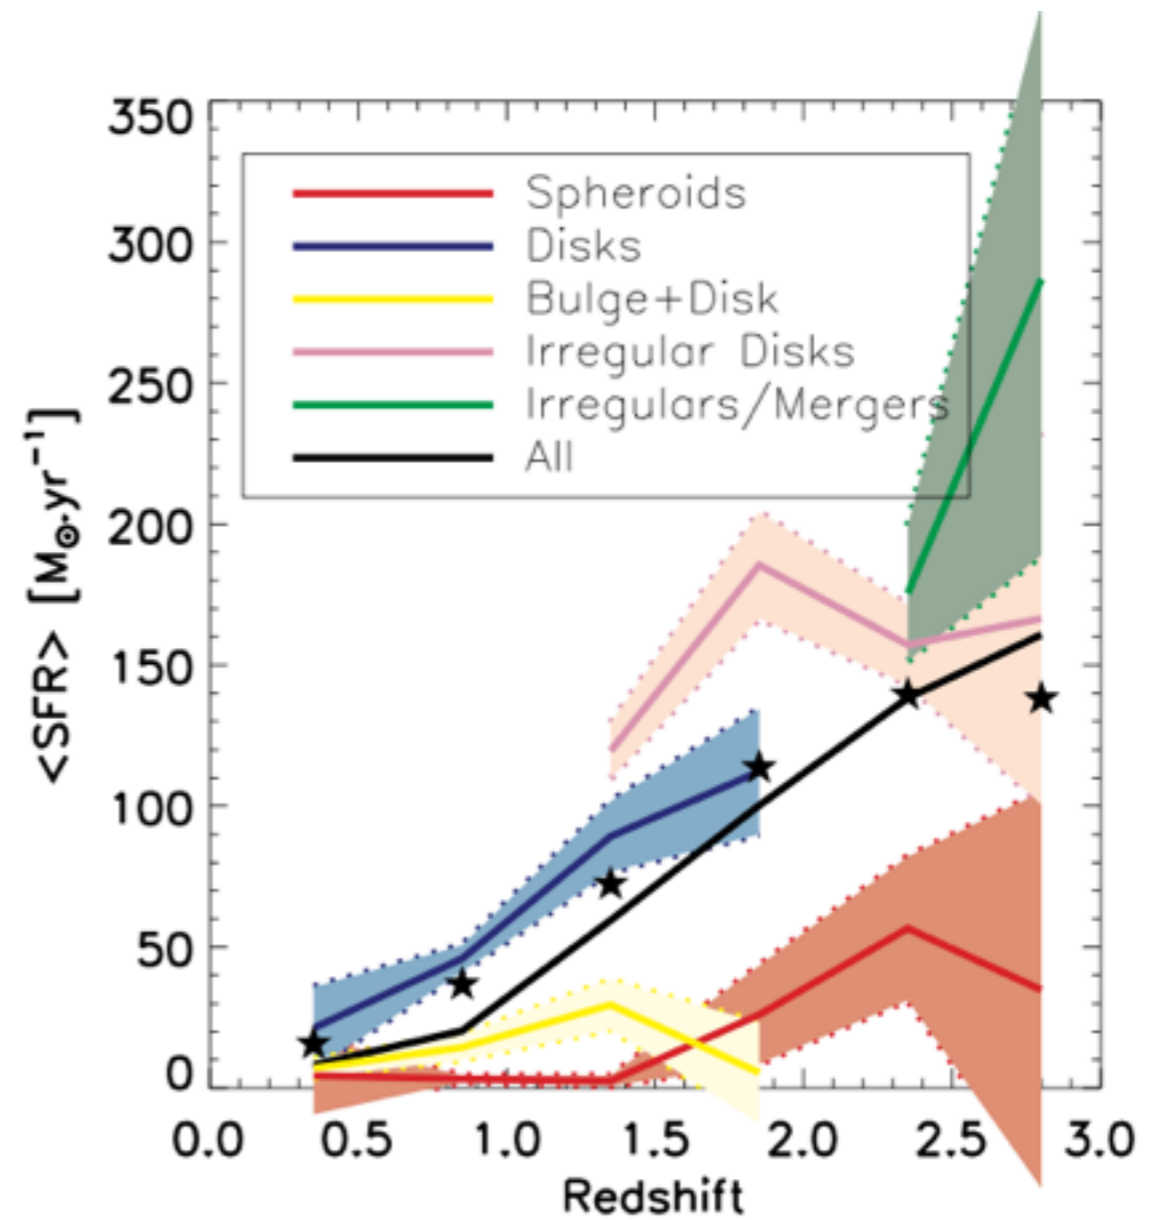

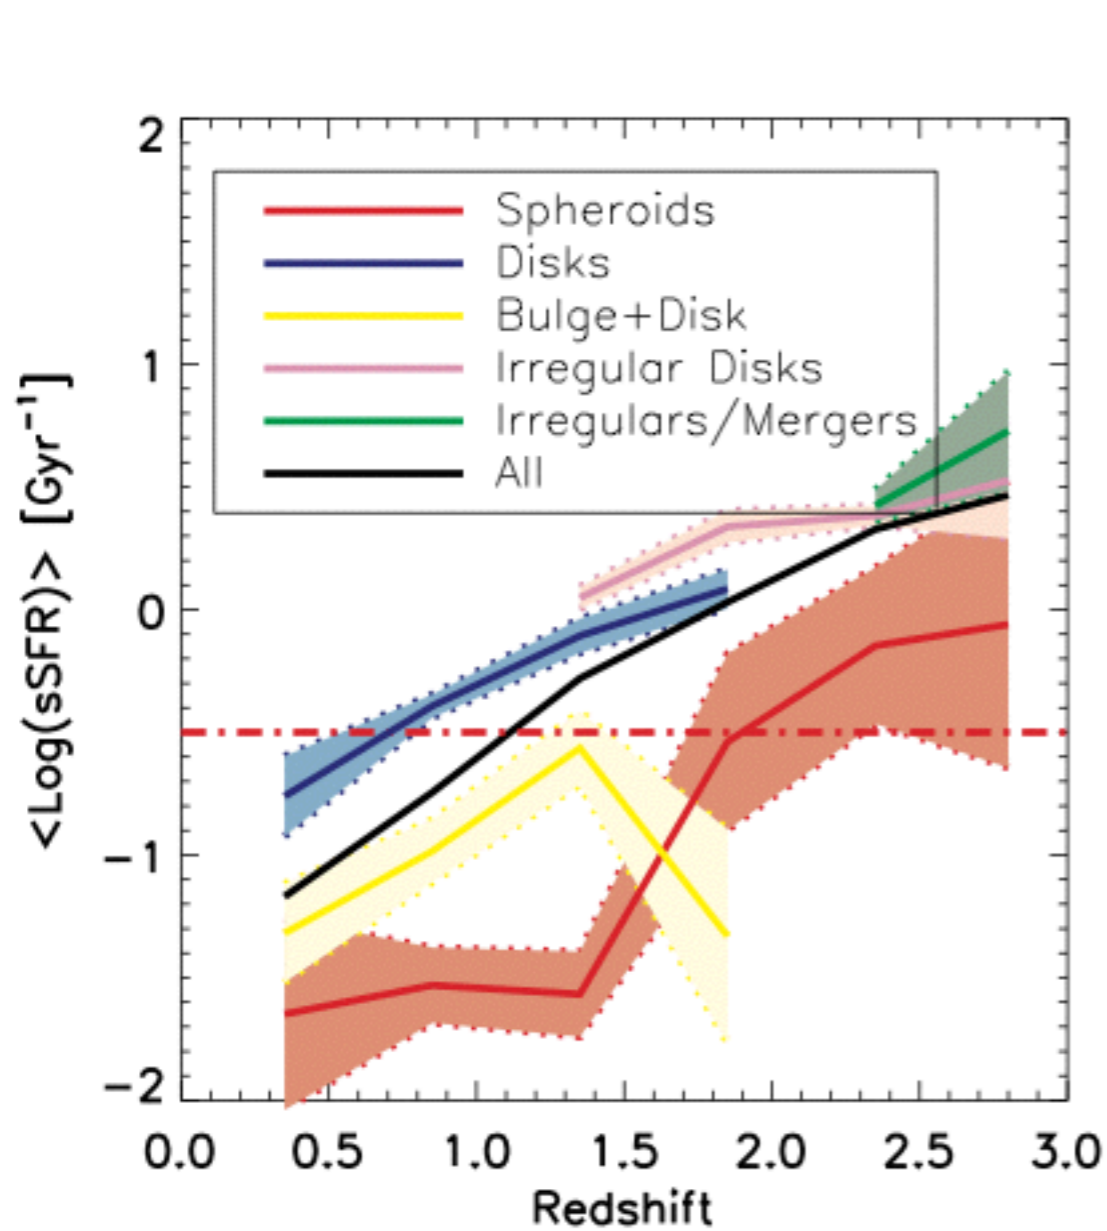

Structure

— ALL

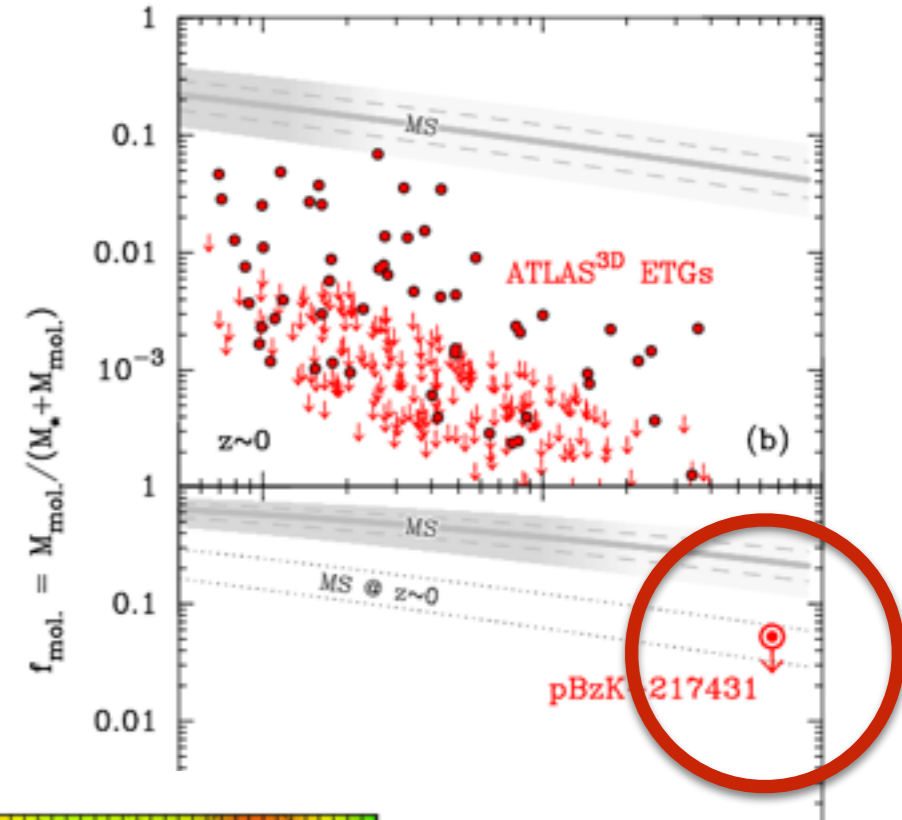

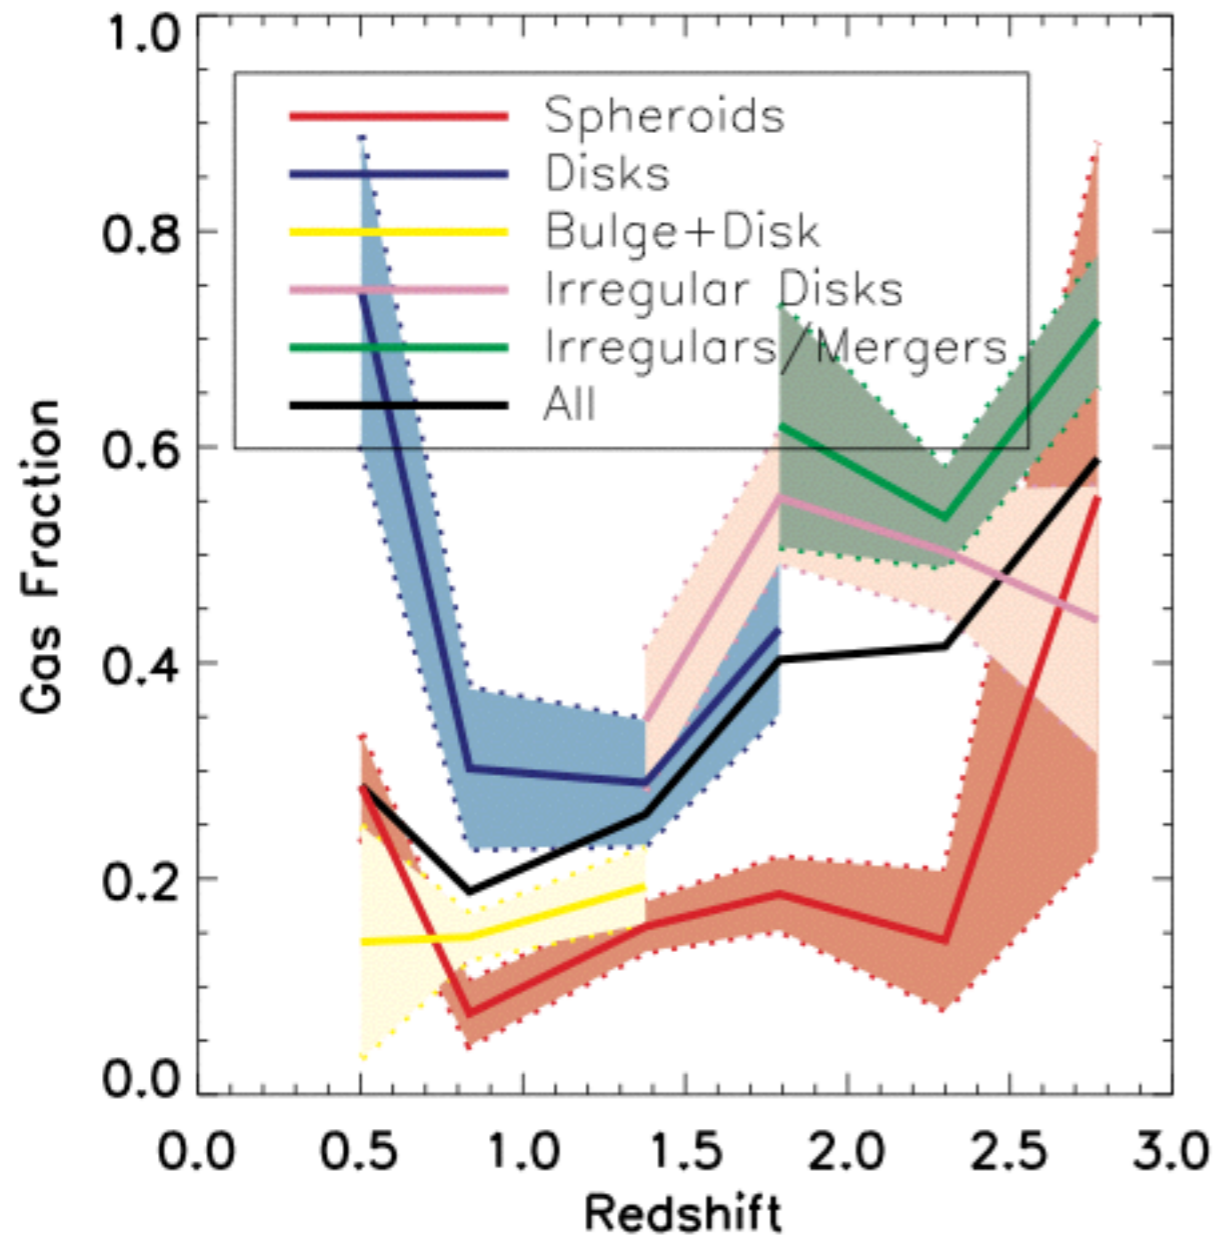

MHC+15b

Star-formation histories

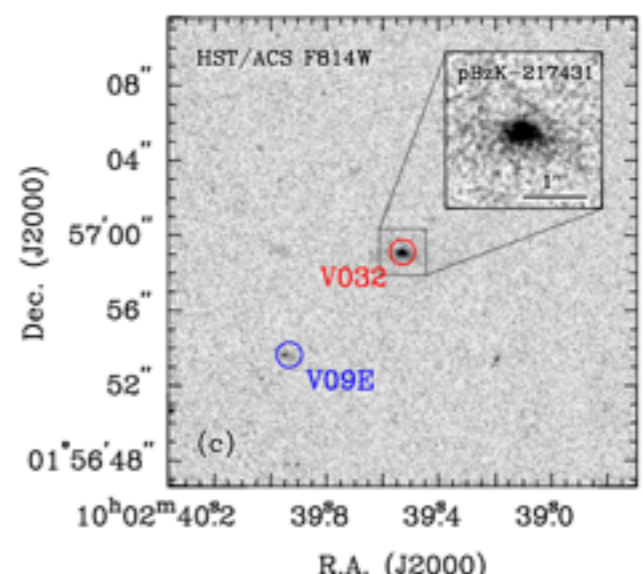

sSFR

(Inferred) Gas fraction

~5% f_{gas}
 10^{11} 10^{12}
 $[M_{\odot}]$

Sargent+15

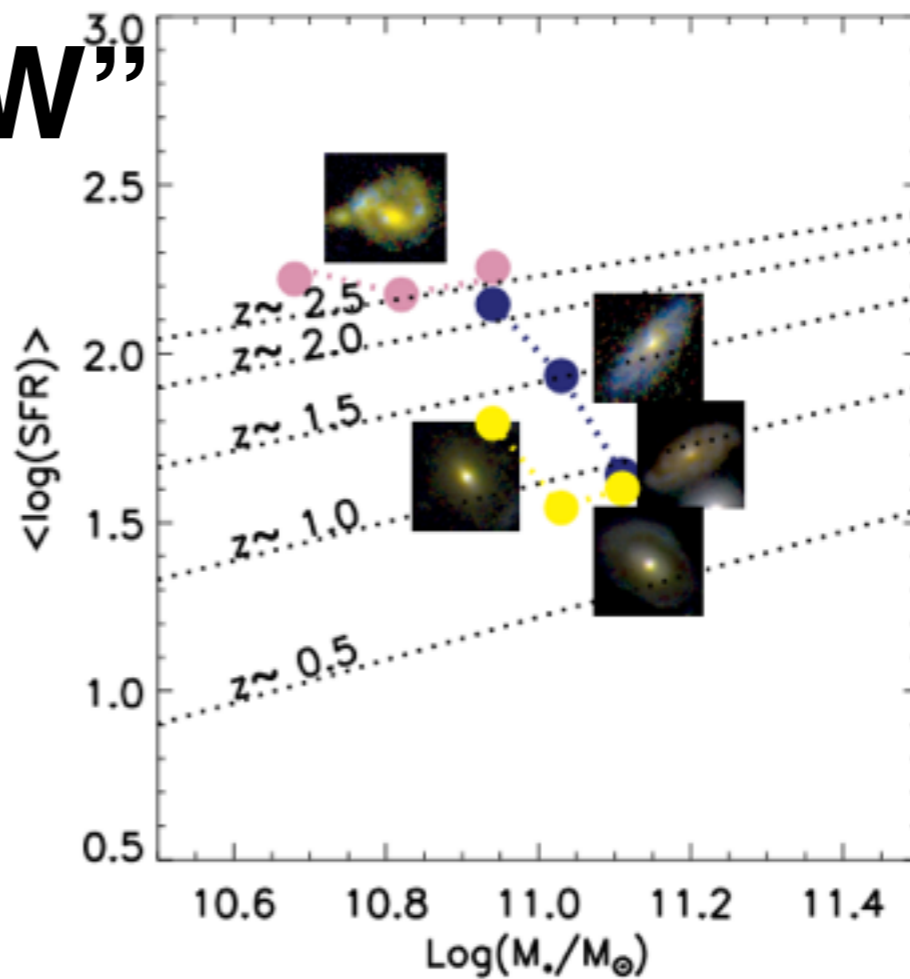

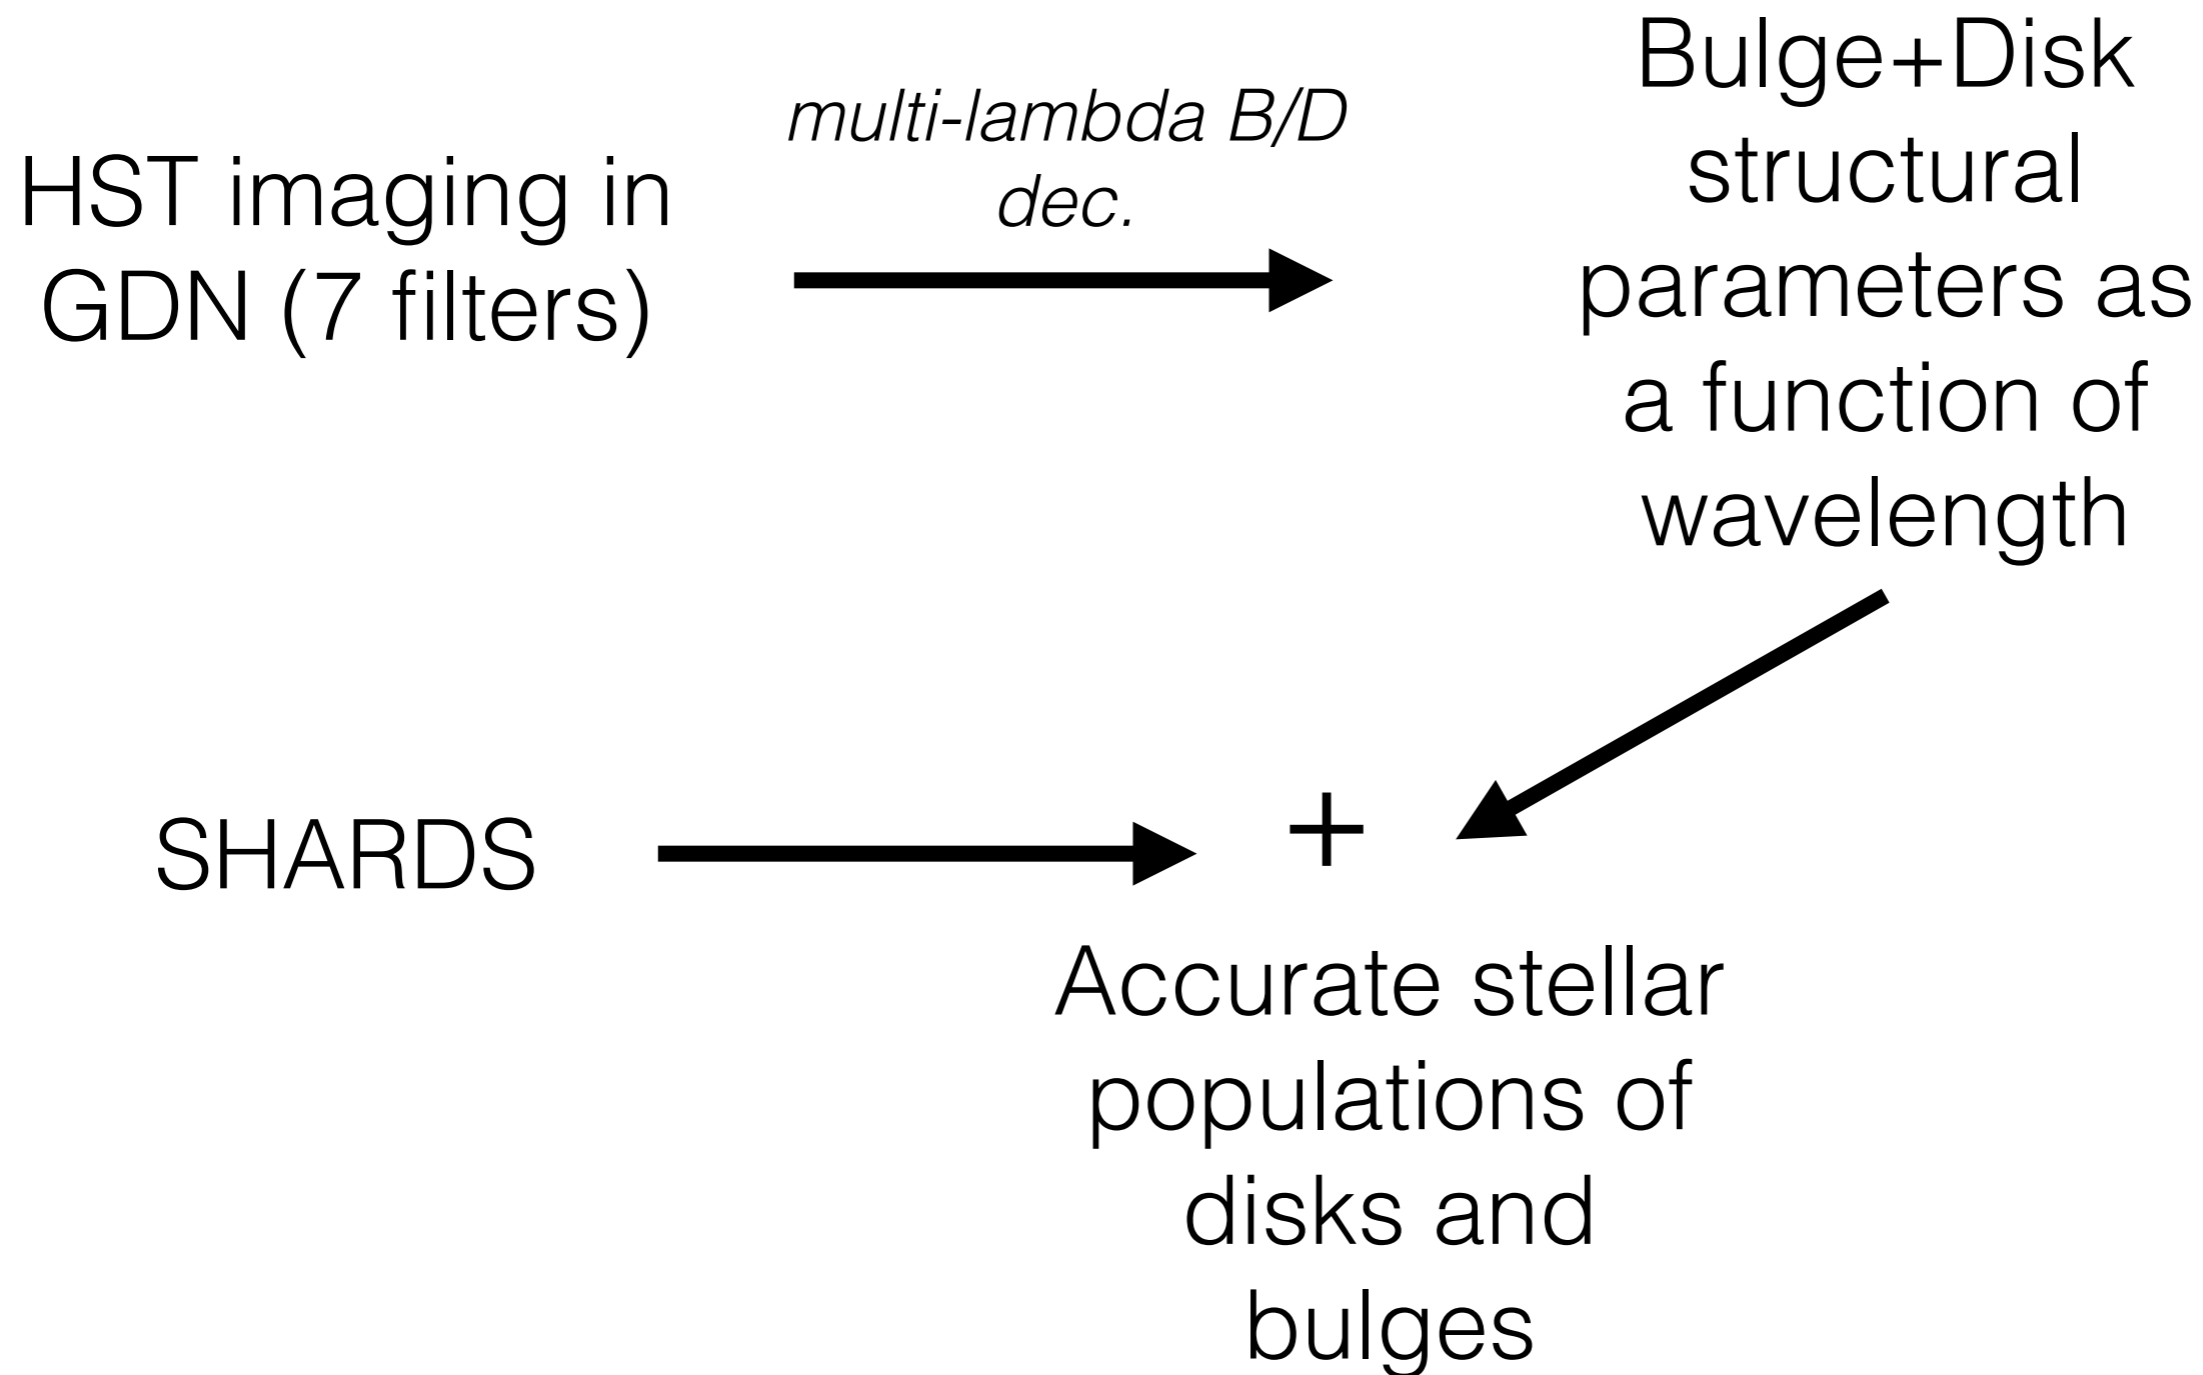

“FAST”

“SLOW”

Testing these tracks with SHARDS (see Paola's talk tomorrow)
