

A new populations of bright massive galaxies at $z>3$

Belén Alcalde Pampliega

Pablo G. Pérez-González, G. Barro, H. Domínguez
Sanchez ,Carmen Eliche-Moral & P. Esquej

Dpto. Física de la Tierra,
Astronomía y Astrofísica II

2nd SHARDS Team Meeting

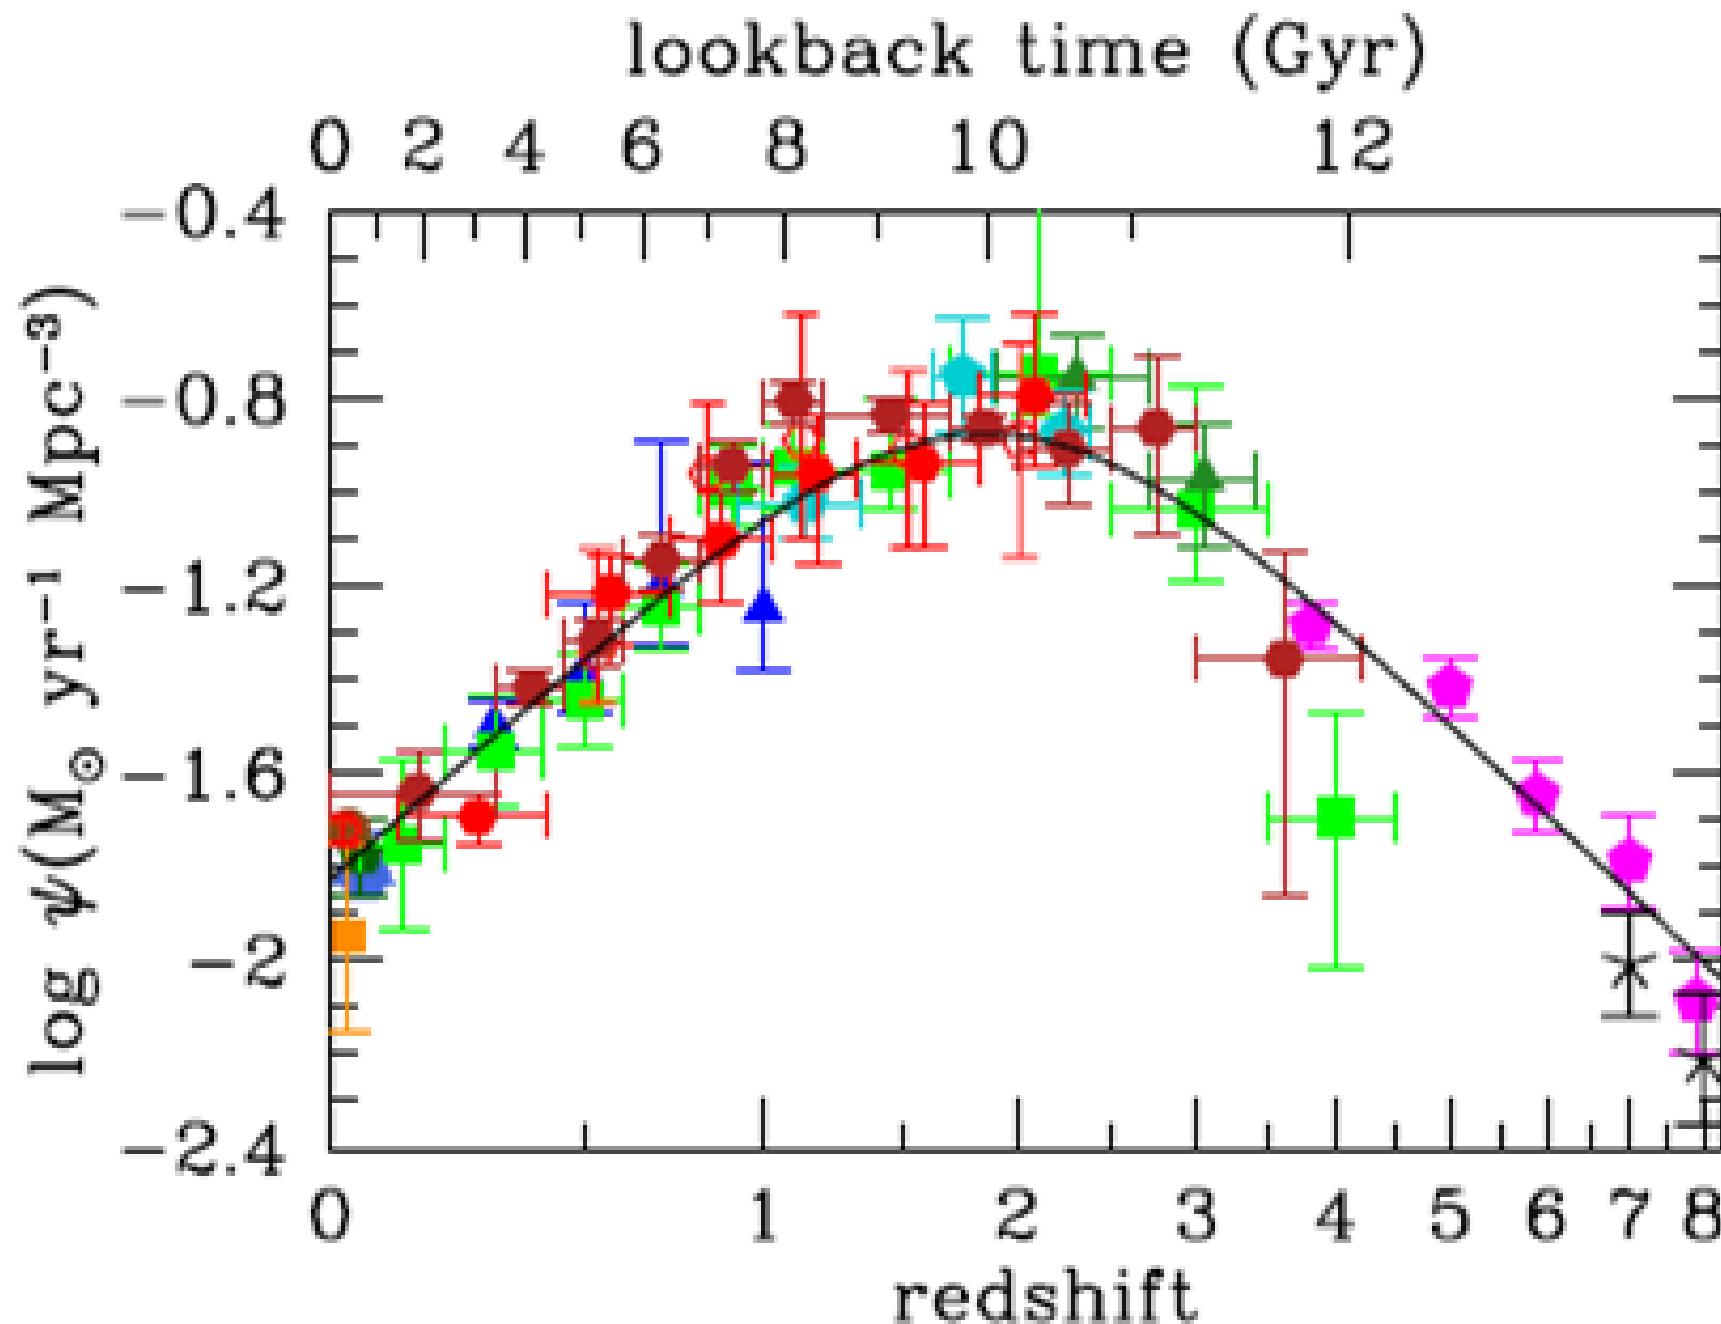

May 13-14, 2015

Our neighborhood

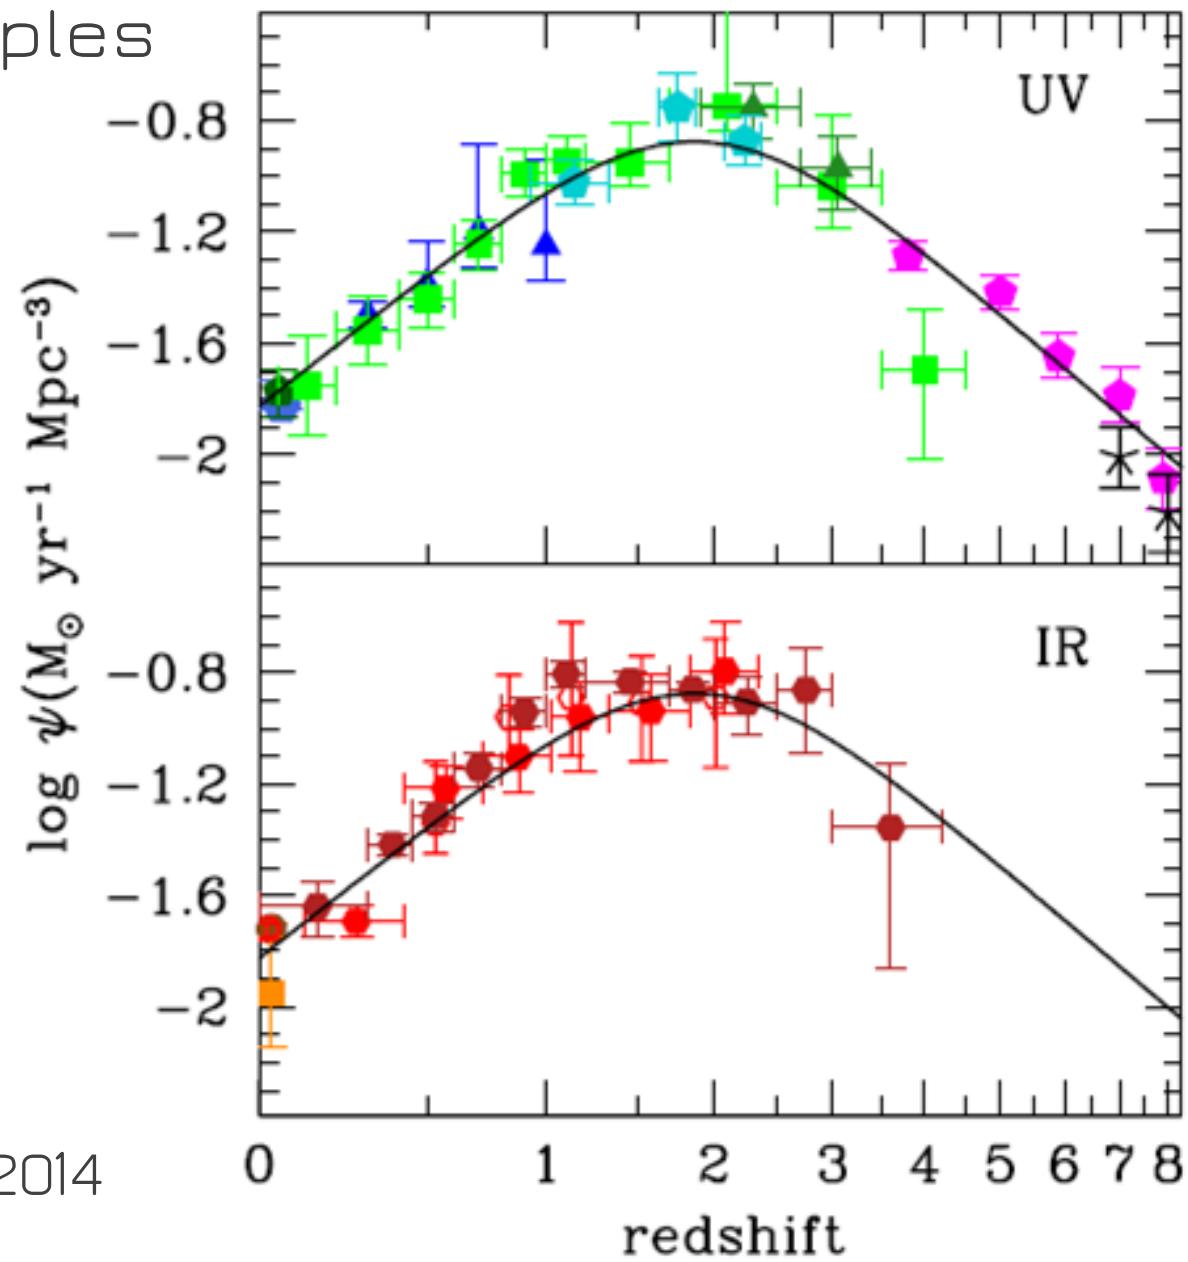

Why $3 < z < 6$?

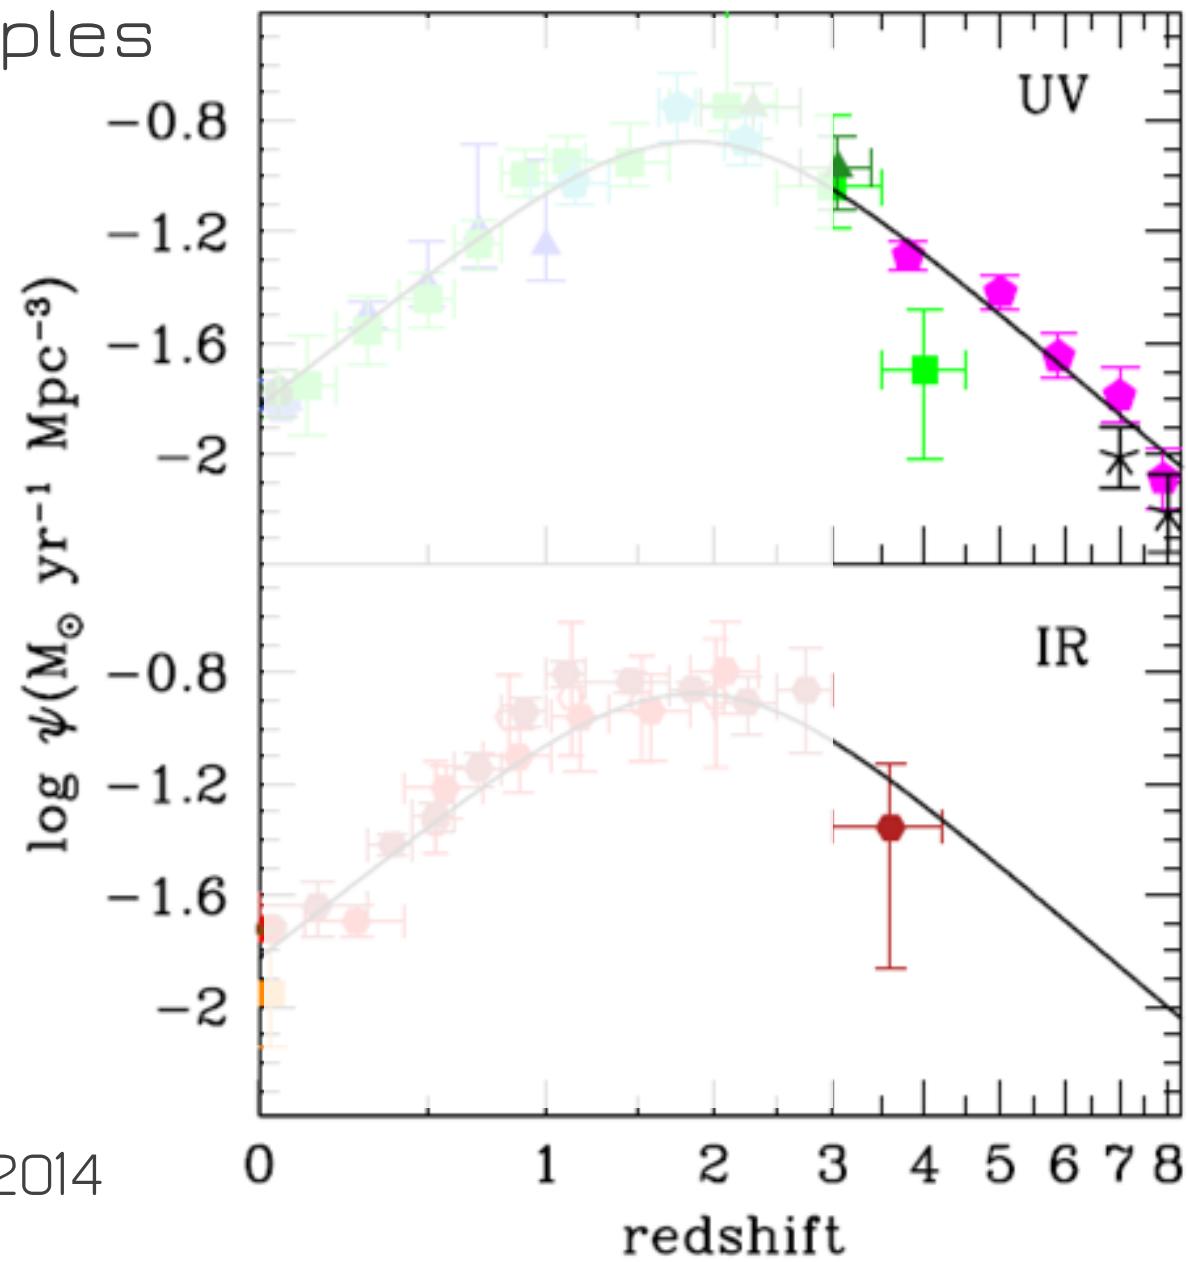

Why $3 < z < 6$?

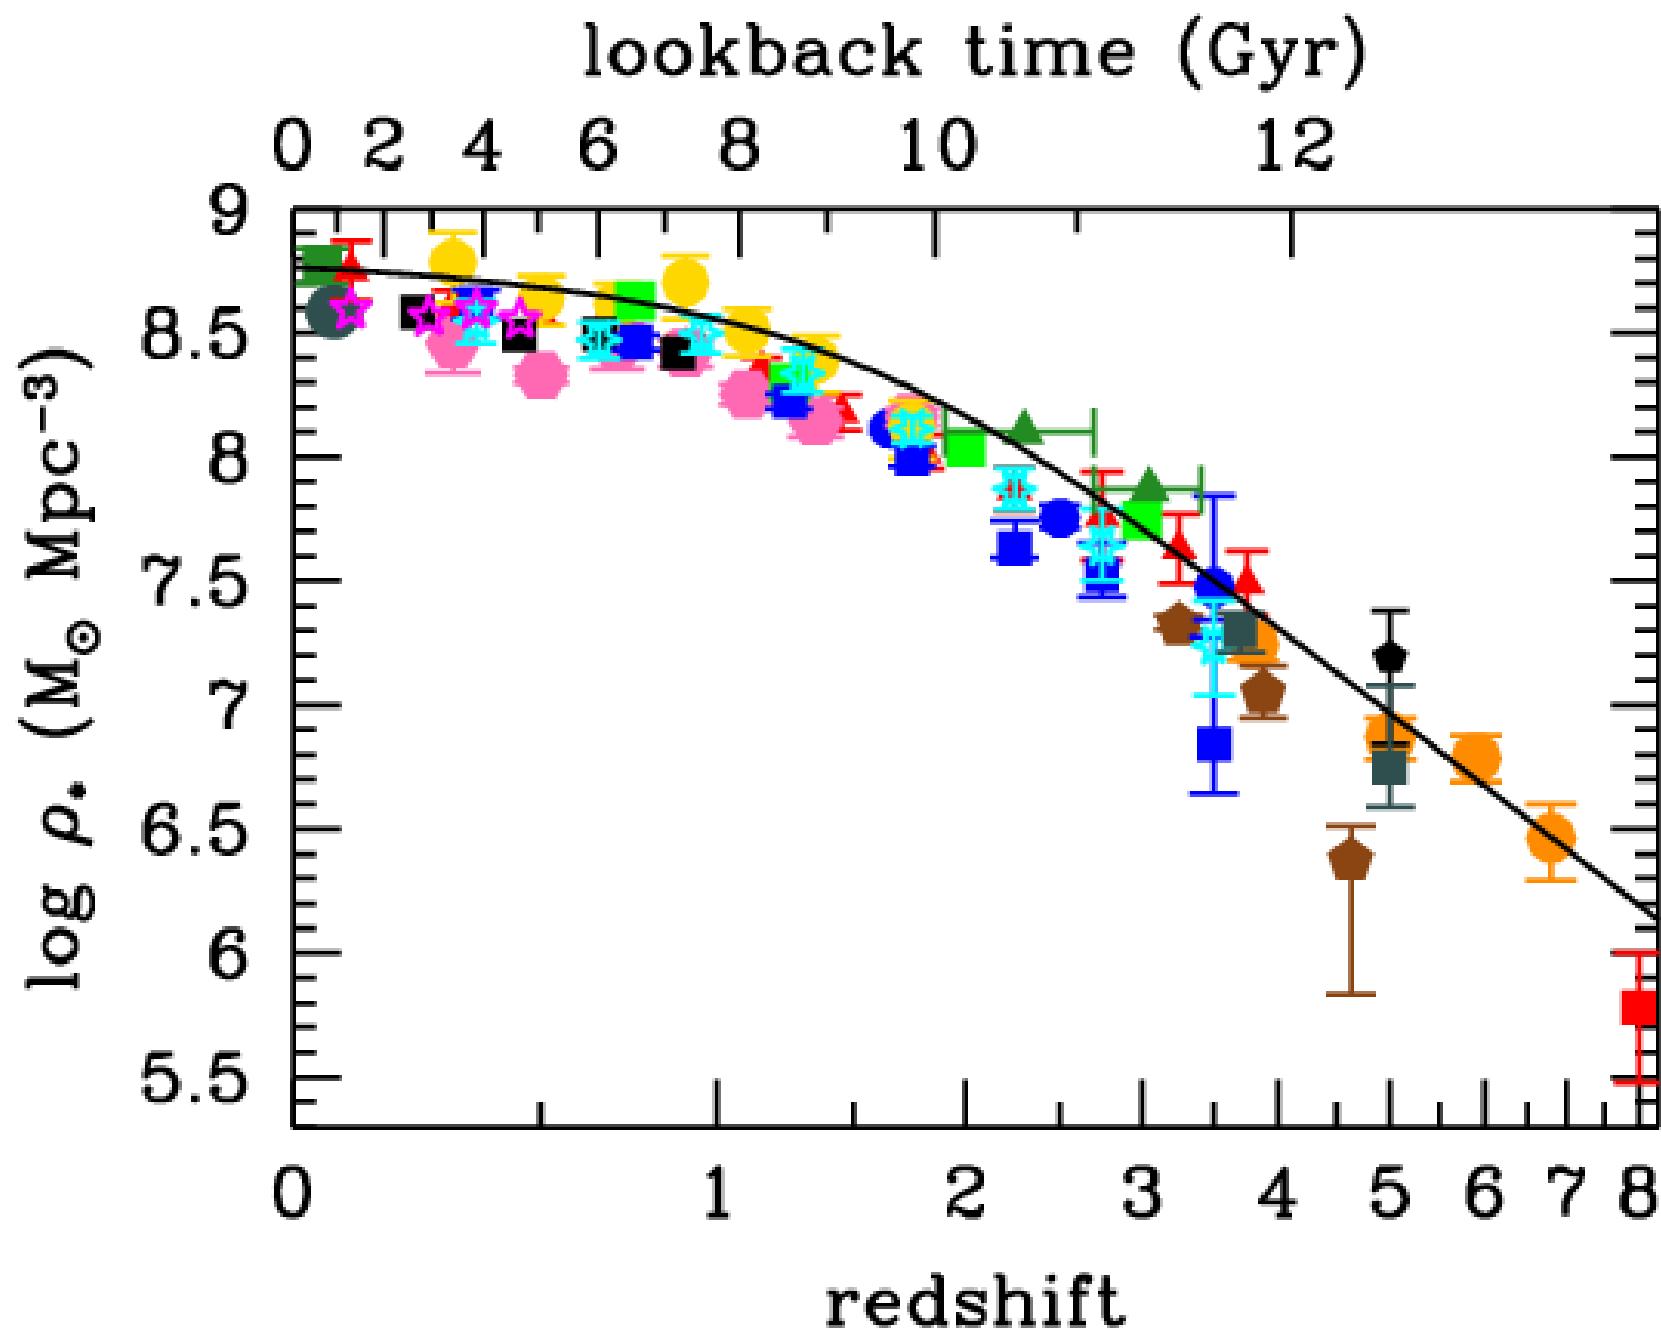

Cosmic SFR density at $z > 3$ mostly based on UV-selected samples

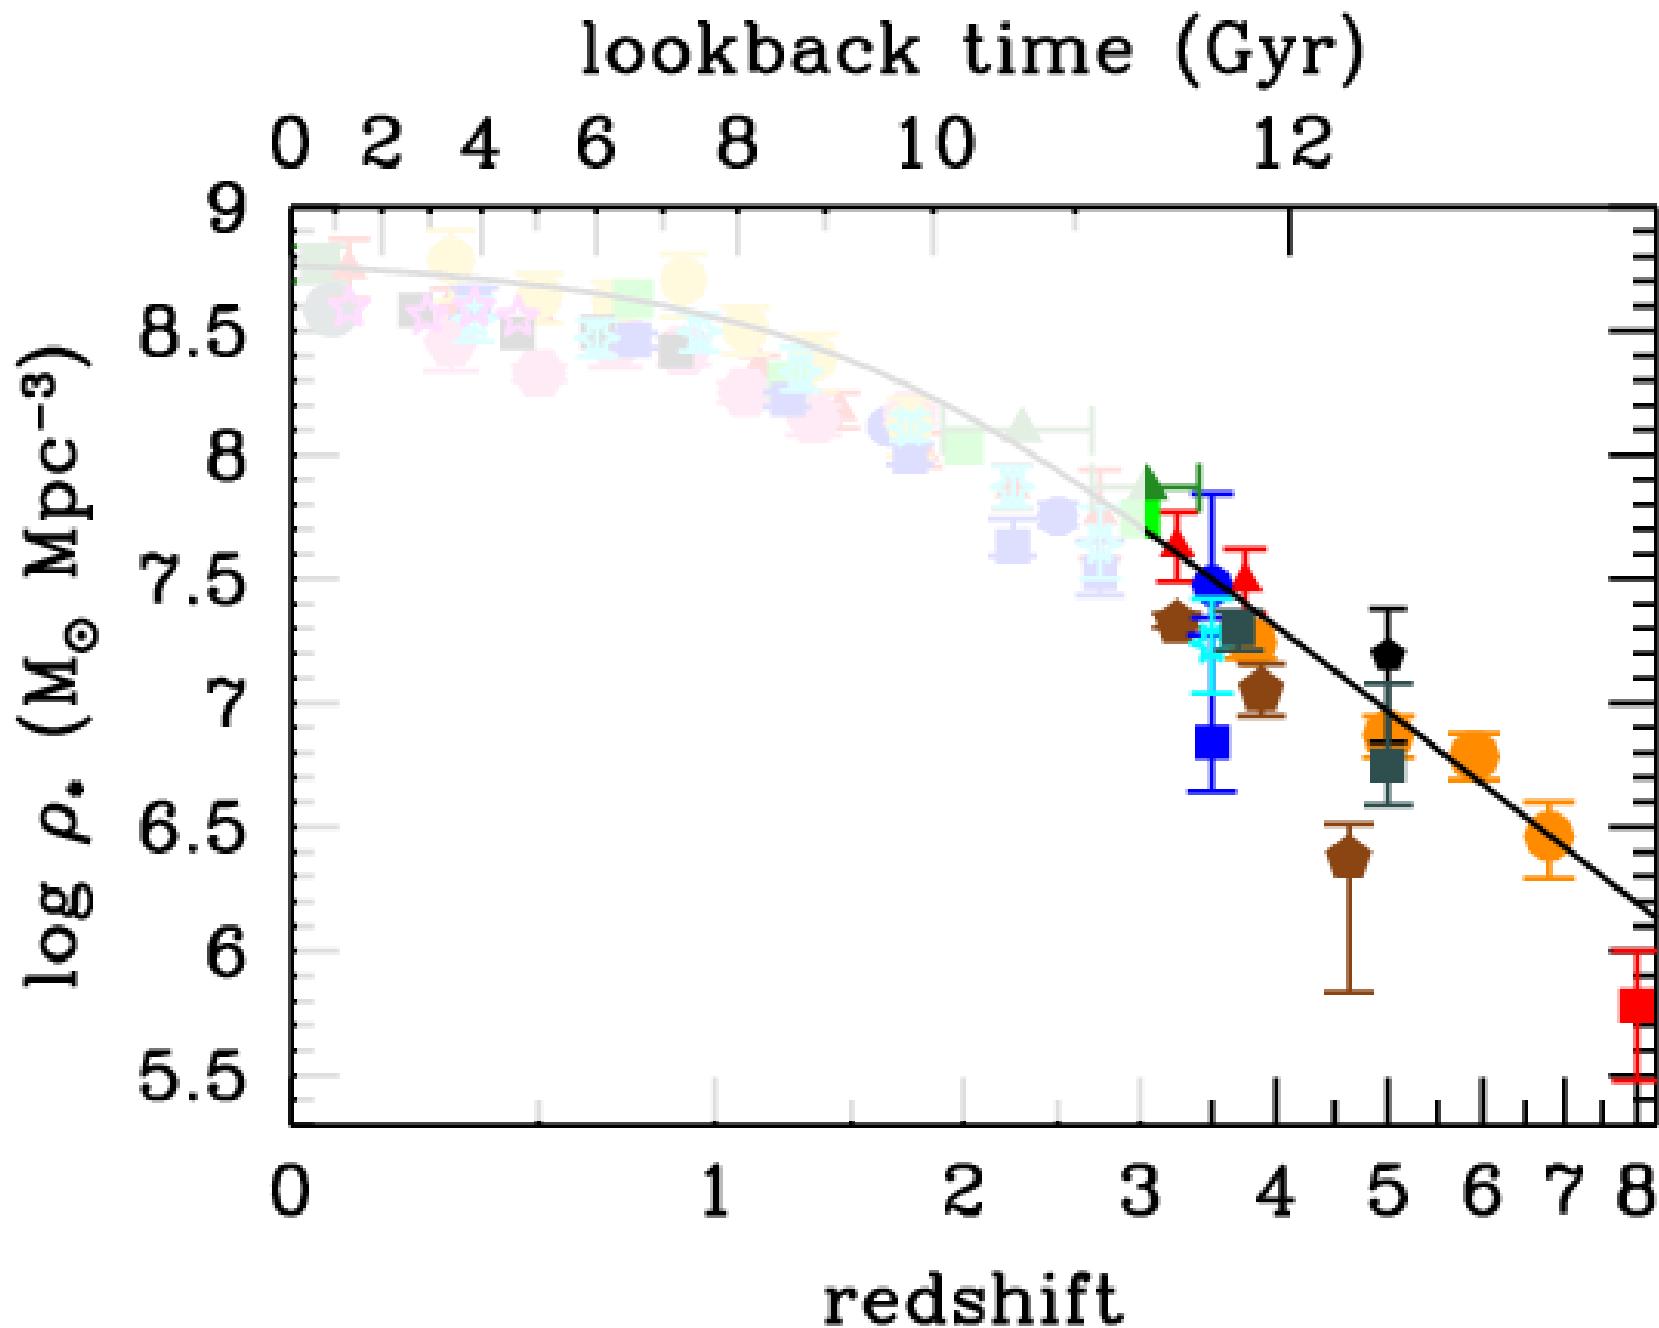

Why $3 < z < 6$?

Cosmic SFR density at $z > 3$ mostly based on UV-selected samples

Evolution of the Stellar Mass

Massive galaxies at $3 < z < 6$

Census of galaxies at $3 < z < 6$

Red sources (massive or dusty)

Emission-line galaxies (LAEs)

Lyman Break Galaxies (LBGs),

Study their physical properties?

Analysis of their stellar populations & SFH.

Understand earliest phases in the formation of galaxies.

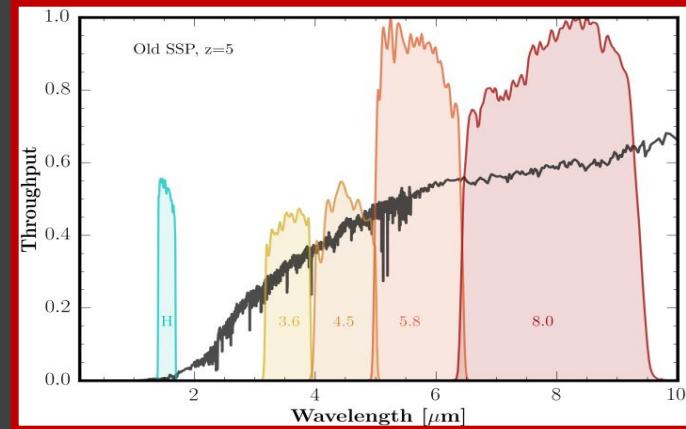

Searching for massive galaxies

GOODS-N field

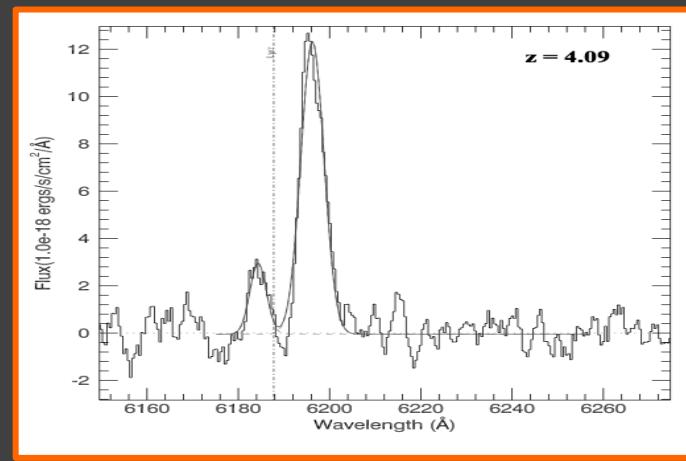

Color-selection criteria

Nature of IRAC only sources

Nature of IRAC only sources

Conclusions & future work

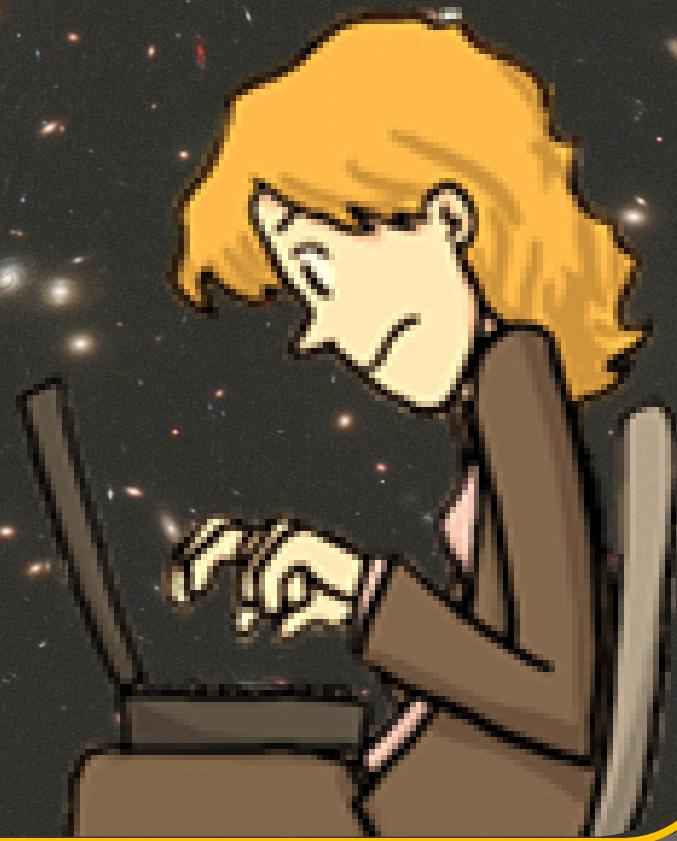

They DO exist &
we are able to identify them

We identify 19 IRAC Only sources
Obscured SF galaxies
Old & dead galaxies

... improve and finalize the
characterization of the sample

... LBGs
... LAEs

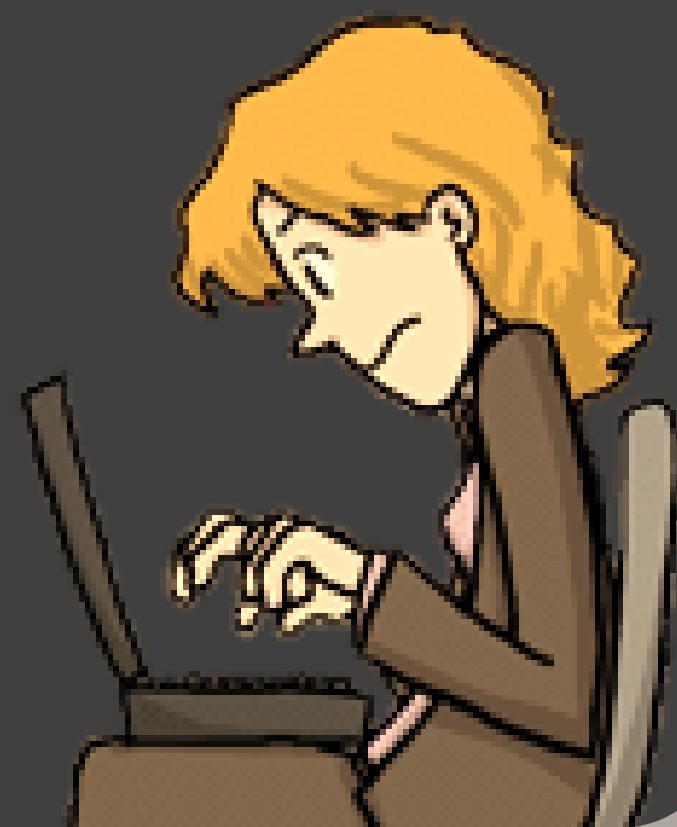

Thanks!
